

ENERGY POLICY

With the awareness of carrying the responsibility of the Energy Management System, we aim to continuously improve our energy performance during all our activities and services, to comply with legal and other requirements, to ensure the participation of all parties we are in contact with in this policy, to transform the Energy Management System awareness into a corporate culture through trainings to be provided at all levels, and to remain environmentally and economically sustainable. In order to realize this goal, we are committed;

- ✓ To ensure efficient energy use without compromising comfort and operations by utilizing existing energy resources in the most efficient way with the full participation and support of our employees and to continuously improve energy performance in line with the "Sustainable Development" approach,
- ✓ To research, implement and maintain methods to reduce greenhouse gas emissions with the understanding of minimum environmental impact,
- ✓ To implement, continuously review and improve the energy management system by integrating it into corporate governance practices,
- ✓ To utilize all kinds of information and resources, to follow new technologies and to research alternative energy sources in order to increase energy efficiency and sustainability in energy distribution and consumption stages,
- ✓ During induction trainings, candidates are informed about the aims and objectives of the energy policy, Energy Management System and energy efficiency,
- ✓ To organize the necessary training programs on improving energy awareness throughout the organization, to provide all kinds of information, documents and resources necessary for these activities and to play an active role,
- ✓ Comply with national and international legislation and laws, regulations, mandatory standards and other requirements,
- ✓ Communicate effectively with customers, authorities, stakeholders and subcontractors on Energy Management related issues to create shared value and beneficial outcomes,
- ✓ To ensure that energy-efficient choices are made in the procurement of energy, products, equipment and services, as well as in design issues with the aim of improving energy performance.
